Education

Queen's University Sep. 2023 – Dec. 2027
Bachelor of Computing (Honours), Specialization in Software Design *Kingston, ON*

- **Relevant Coursework:** Data Structures, Algorithms I, Operating Systems, Software Architecture, Software Quality Assurance, Software Specifications, Formal Methods in Software Engineering, Coding AI for Business

Technical Skills

Languages: Python, Java, C, SQL, Bash, HTML/CSS
Frameworks & Libraries: Flask, asyncio, WebSockets, Pandas, NumPy, Scikit-learn, Matplotlib
AI & APIs: Anthropic API, Claude Code, Whisper, ElevenLabs, REST APIs, Prompt Engineering
Tools & Platforms: Git, Linux, AWS (EC2, S3, RDS, Lambda), PostgreSQL, SQLite, Vector Databases, Vercel

Experience

Founder, LeetCoach Oct. 2026 – Present
inQUbate, Queen's University | Python, Flask, PostgreSQL, Anthropic API *Kingston, ON*

- Selected for inQUbate's 2026–27 founder cohort to grow LeetCoach, an AI interview-prep platform, into a startup.
- Built a live AI coach with a four-tier Socratic hint system (guiding question → named pattern → applied reasoning → pseudocode) via prompt engineering with the Anthropic API.
- Engineered a judge for 35 problems in Python, JavaScript, Java, and C++ with sandboxed and remote execution, deployed on Vercel with a Neon PostgreSQL database.

Industry Development Coordinator Oct. 2026 – Present
Queen's Computing Students' Association (COMPSA) *Kingston, ON*

- Plan and execute career-focused events, workshops, and networking opportunities connecting Queen's Computing students with industry professionals.
- Conduct outreach to companies, alumni, and speakers to build external partnerships and bring industry perspectives to COMPSA programming.
- Collaborate with the industry development director and coordinators, taking ownership of portfolio projects throughout the year.

Teaching Assistant Sep. 2025 – Dec. 2025
Smith Engineering, Queen's University | C *Kingston, ON*

- Supported the delivery of APSC 141 (Introduction to Computer Programming) for 750+ first-year engineering students.
- Led lab sessions teaching foundational C concepts, including loops, conditionals, functions, and data structures.
- Graded assignments, quizzes, and exams to ensure alignment with course learning outcomes.

Projects

J.A.R.V.I.S. – Voice-Activated AI Assistant | *Python, WebSockets, Whisper, ElevenLabs, SQLite*

- Architected a real-time streaming pipeline using Whisper (speech-to-text) and ElevenLabs (text-to-speech) over WebSockets with sub-second latency.
- Implemented function calling for web search, local automation, and system diagnostics, with a vector database for cross-session memory.
- Designed asynchronous task execution with Python's `asyncio` to handle concurrent voice input and background commands.

Certifications

AWS Certified Cloud Practitioner, Amazon Web Services (Projected) Dec. 2026
Complete Data Science Bootcamp, 365 Careers Dec. 2024
CS50: Introduction to Programming with Python, Harvard University Nov. 2024
